Dear Jackelyn

I am Carmen Salazar, a first year sociology student in the PhD program at the University of CA, Merced. This semester I am taking a graduate statistics course taught by Dr. Charlie Eaton and as an assignment I need to contact authors whose quantitative methods and data source I think could be repurposed for my own research project. I have been working with Dr. Tanya Golash-Boza on a research project focused on gentrification, more specifically, whether the qualitative Google Street View captures gentrification in Washington D.C. I have conducted extensive literature review, compared Google Street View with Census data, and created a comparison of qualitative and quantitative measures of gentrification. I have come across your literature on "Divergent Pathways of Gentrification: Racial Inequality and the Social Order of Renewal in Chicago Neighborhoods" and believe your quantitative methods could help me answer questions related to my own research questions. Therefore, I was wondering if you would be willing to share your source data and or analysis code.

Thank you for your time.

Carmen
